FOREWORD

1. PURPOSE: To promulgate data elements and related features to be used in automated and manual data systems for identifying geopolitical locations or areas. The data elements have been developed by the Defense Intelligence Agency within the parameters of the Department of Defense Data Standardization Program established by DoD Directive 5000.11 under the authority as the Assigned Responsible Agency (ARA) for the standardization of geopolitical data elements and related features. The content of this manual does not supersede geopolitical coding specified in individual intelligence manuals until official changes are published for those manuals by the appropriate originating office.

2. Not applicable.

3. SUPEROBSESSION: This manual supersedes DIA Instruction 65-5, "DoD Standard Geopolitical Code," 31 March 1965.

4. REFERENCES:

a. DoD Directive 5105.21, "Defense Intelligence Agency," 1 August 1961, as amended.

b. DoD Manual 5000.12A, "DoD Manual for Standard Data Elements," 1 March 1970, as changed.

5. SCOPE: This manual provides a categorical grouping of data standards which may be employed hierarchically from a celestial body of the solar system to the first order administrative division of a country. Other data elements and related features will be added as requirements are identified, coordinated, and approved.

6. DEFINITIONS: A glossary of definitions is provided. (See appendix A.)

7. STANDARD DESCRIPTION FORMAT: The format used throughout this manual for describing data standards is shown in appendix B. Paragraphs in the descriptions are numbered according to this format even though omission of some paragraphs may result in gaps in the sequence of paragraph numbers; for example, where no Special Applications (paragraph 10)

are described, paragraph 10 is omitted. The paragraph containing data items and codes is number 11, and this number is retained, resulting in a paragraph number sequence of 7, 8, 9, 11. The rationale for this practice is to enable the user to look for the same paragraph number for the same information in data descriptions throughout the manual. Elimination of unnecessary paragraphs conserves space.

CHAPTER 1

INTRODUCTION1. GENERAL:

a. For some time the Department of Defense has lacked a satisfactory method of identifying geopolitical locations, from the standpoint of standardization and data exchange requirements. No one existing system contains geopolitical identification that could be proposed as a standard. Recent examples of the lack of standardization include:

(1) Different levels of aggregation: Aggregation has been accomplished without a standard base from which to aggregate, and generally dictated by operational requirements of a particular system. Therefore, no standard aggregation capability has existed.

(2) Different definitions (scope) of foreign areas: some country listings include South-West Africa, while other lists do not do so; some lists include Corsica with France, Sicily and Sardinia with Italy, and Tibet with the Peoples Republic of China, while others do not; some lists aggregate different political affiliations in a single geographic entity, as in the case of Reunion (Fr.) and Mauritius (U.K.) under Mascarene Islands, while other systems treat them as separate entities.

(3) Different terminology (names): West Germany or Federal Republic of Germany; Southern Yemen, Peoples Democratic Republic of Yemen, or Yemen (Aden); Melilla or Spanish Territories in Morocco.

(4) Different data codes: Panama has been coded as PN, HPN, 225, 525, HPMOOM, and PAN.

b. Further, country names and definitions change. New countries emerge as a result of political cleavage within an existing country. Mergers of existing countries also occur. Some countries change administrative divisions within their boundaries quite frequently and much research is required to avoid the resulting ambiguity. Different user viewpoints and responsibilities require many different aggregations of countries in accordance with geographic, political, military, economic, ethnic and other considerations.

c. To deal with these problems, DIA determined that not only standard names, definitions, and data codes, but also mechanisms to effect necessary changes are needed. We need not simply a one-time adequately defined list of geopolitical entities with data codes, but a differentiated, dynamic system of standardization with built-in mechanisms for implementation and change. DIA, as the Assigned Responsible Agency (ARA) for the standardization of geopolitical data elements and related features, has developed a family of geopolitical data elements which are designated to resolve these problems and inherent complications.

2. THE GEOPOLITICAL STANDARDIZATION PROGRAM:

a. The foundation or cornerstone for the development of all geopolitical data standards was the approval of a standard for country identification within the Department of Defense in October 1969. This standard has since evolved into a Federal General Data Standard as promulgated in Federal Information Processing Standards Publication (FIPS Pub 10), 15 June 1970.

b. With the country standard serving as a firm base and a point of departure, one of the earlier decisions of DIA was to provide a basic group of geopolitical data elements to meet the minimum need of all users. First, uniform subdivisions of the earth were divided into data elements, then into data items, these elements and items were defined before assigning data codes. Definitions of data elements and data items are logically needed prior to their representations by data codes. If definitions are not the same, real problems will exist in data exchange; while if definitions are standard, but their codes differ, it is possible (however costly) to mechanically relate the different codes. This approach materially assisted in determining the best structure for the family of geopolitical data elements, and aided in the design of a flexible coding scheme in support of them. Primarily, standardization must occur in the process of identifying and defining data elements and data items. Then, and only then, may the defined data items be assigned a standard data code to represent them.

3. THE GEOPOLITICAL DATA ELEMENTS: The basic group of standard data elements approved to date consist of homogeneous subunits of information (data items) identified as: natural physical divisions to include celestial bodies and divisions of the earth; countries, dependencies, and areas of special sovereignty; the first-order administrative divisions of countries; and internationally accepted water locations. These standards are promulgated in chapter 2 of this manual. A number of additional geopolitical data elements are under development and will be promulgated when approved.

4. FILE DESIGN: The intended usage of standard data elements in existing and newly created data files is a consideration that must be assessed by an Assigned Responsible Agency in the development of any data elements. However, this consideration cannot dictate data element configurations or data code assignments. The use of standard data elements within a data file is an issue which must, in the end, be resolved by systems managers/designers. Therefore, the use of standard data elements has been left to the discretion of the system designers/managers with the understanding that standard data elements and related features be used when applicable by definition. Consequently, file design and data exchange procedures are not discussed in this manual.

5. SUMMARY: The Defense Intelligence Agency, as the ARA for geopolitical data elements, has attempted to assess the overall requirement for standardization and to satisfy this requirement with as much foresight and flexibility

29 September 1972

DIAM 65-18

as feasibly possible within the scope and definition of the DoD Data Standardization Plan. The impact of a "new" group of geopolitical data elements standards on "in-house" developed systems and data files is recognized. The family of geopolitical data elements promulgated herein and under development satisfies the known requirements for standard location identification of geopolitical entities. The ARA remains receptive to constructive proposals.

CHAPTER 2

GEOPOLITICAL DATA STANDARDS

1. INTRODUCTION: This chapter consists of categorically grouped data standards which have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense. The combined structure is included in appendix F.

2. DATA STANDARDS:

- a. Data Standard No. 1, Celestial Body of the Solar System.
- b. Data Standard No. 2, Terrestrial Hemisphere.
- c. Data Standard No. 3, Division of the World.
- d. Data Standard No. 4, Water Body of the World.
- e. Data Standard No. 5, Countries of the World.
- f. Data Standard No. 6, State-Province of a Country.
- g. Data Standard No. 7, Data Chain, States-Provinces of Countries of the World.
- h. Data Standard No. 8, Region of Country.

DATA STANDARD NO. 1

1. NAME: CELESTIAL BODY OF THE SOLAR SYSTEM.
2. ABBREVIATION: CELSTL-BDY-SOLR-SYS
3. DIA REFERENCE NUMBER (STID): E00362. DOD REFERENCE NUMBER: CE-BO.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: Any of the planets, satellites, asteroids, captured comets, meteor swarms, and other natural physical bodies including the sun, held by the gravitational system of the sun and revolving around it.

6. FORMAT DESCRIPTION:

- a. Type: Data element.
- b. Field Length: 2 character-positions.
- c. Structure: Alpha; code.

9. DATA USE IDENTIFIER:

- a. Name: Celestial Body of the Solar System.
 - (1) Abbreviation: CELSTL-BDY-SOLR-SYS.
 - (3) Explanation: See above definition.

11. DATA ITEMS AND CODES:

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
01	Earth	EARTH	AA

e. Explanation

One of the nine planets of our solar system located approximately 93 million miles from the sun with a diameter of 8,000 miles.

02	Jupiter	JUPTR	JP
----	---------	-------	----

One of the nine planets of our solar system located approximately 484 million miles from the sun with a diameter of 71,000 miles.

a. Item No. b. Item Name c. Item Abbreviation d. Data Code

03 Mars MARS MS

e. Explanation

One of the nine planets of our solar system located approximately 142 million miles from the sun with a diameter of 4,000 miles.

04 Mercury MCURY MD

One of the nine planets of our solar system located approximately 36 million miles from the sun with a diameter of 3,000 miles.

05 Moon 1 - Earth MOON-EARTH EA

The earth's only natural satellite which revolves around the earth at a distance of approximately 239,000 miles with a diameter of 2,160 miles.

06 Neptune NPTUN NT

One of the nine planets of our solar system located approximately 2,800 million miles from the sun with a diameter of 31,000 miles.

07 Pluto PLUTO PD

One of the nine planets of our solar system located approximately 3,680 million miles from the sun with a diameter of 3,000 miles.

08 Saturn SATRN SR

One of the nine planets of our solar system located approximately 887 million miles from the sun with a diameter of 71,000 miles.

09 Sun SUN SX

The star and concentric body in our solar system with a diameter of approximately 860,000 miles.

10 Uranus URNUS UA

One of the nine planets of our solar system located approximately 1,790 million miles from the sun with a diameter of 32,000 miles.

DIAM 65-18

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
11	Venus	VENUS	VR

e. Explanation

One of the nine planets of our solar system located approximately 67 million miles from the sun with a diameter of 8,000 miles.

NOTE: A complete list of data items is not included in this data element but is provided for and can be added when a requirement is identified. Projected data items include 30 satellites and 20 meteors.

DATA STANDARD NO. 2

1. NAME: TERRESTRIAL HEMISPHERE.
2. ABBREVIATION: TERR-HEMSPHR.
3. DIA REFERENCE NUMBER (STID): EQ0174. DOD REFERENCE NUMBER: TE-SN.
4. REQUIREMENT: The standardization of this data element establishes as a matter of record a longstanding usage in the mapping, charting, and geodesy area of intelligence interest.
5. DEFINITION: That one-half of the terrestrial globe, divided by the Equator into north and south latitudes, and by the prime or zero meridian into east and west longitudes.
6. FORMAT DESCRIPTION:
 - a. Type: Data element.
 - b. Field Length: 1 character-position.
 - c. Structure: Alpha; code.
9. DATA USE IDENTIFIERS:
 - a. Name: Terrestrial Hemisphere.
 - (1) Abbreviation: TERR-HEMSPHR.
 - (3) Explanation: See above definition.
 - b. Name: Latitudinal Hemisphere.
 - (1) Abbreviation: LAT-HEMSPHR.
 - c. Name: Longitudinal Hemisphere.
 - (1) Abbreviation: LONGE-HEMSPHR.
11. DATA ITEMS AND CODES:

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
1	North Latitude Hemisphere	N-LAT-HEMSPHR	N
2	South Latitude Hemisphere	S-LAT-HEMSPHR	S
3	East Longitude Hemisphere	E-LONGE-HEMSPHR	E
4	West Longitude Hemisphere	W-LONGE-HEMSPHR	W

DATA STANDARD NO. 3

1. NAME: DIVISION OF THE WORLD.
2. ABBREVIATION: DIV-WRLD.
3. DIA REFERENCE NUMBER (STID): E00026. DoD REFERENCE NUMBER: DI-WD.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: The seven major landmasses (continents) and nine special purpose groupings of water and islands which in aggregation encompass the entire surface of the earth.
6. FORMAT DESCRIPTION:
 - a. Type: Data element.
 - b. Field Length: 1 character-position.
 - c. Structure: Alpha/numeric; code.
9. DATA USE IDENTIFIER:
 - a. Name: Division of the World.
 - (1) Abbreviation: DIV-WRLD.
 - (2) Explanation: See above definition.
11. DATA ITEMS AND CODES:

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
1	Africa	AFR	F
e. <u>Explanation</u>			
A continent between the Indian and Atlantic Oceans extending north from the Indian and South Atlantic Ocean Aggregations to the European Continent at the Strait of Gibraltar and the Asian Continent at the western shores of the Sinai Peninsula.			

14 September 1973

a. Item No. b. Item Name c. Item Abbreviation d. Data Code

2 Antarctic
 Continent ANARTC T

e. Explanation

Continent in the area of the South Pole largely within the Antarctic Circle. Includes all landmasses within the Antarctic Circle plus Graham Land.

3 Asia ASIA A

Earth's largest continent, extending east from the western borders of the Soviet Union, the eastern shore of the Red Sea, and the Mediterranean Sea to the North Pacific Ocean; north to land's end at the Arctic Ocean, including the land areas in the Arctic coastal regions of the Kara and Laptev Seas; south to the coastal regions of the Indian Ocean. The continent includes the islands of Sri Lanka (Ceylon), Japan, Taiwan, Philippines, the island groups between the Timor Islands, the Philippines, Sumatra, and Java Islands; also the western part of the island of New Guinea to the Asian mainland.

4 Australian
 Continent AUSTL-CNTNT U

Island continent in the Southern Hemisphere bounded on the south and west by the Indian Ocean and on the east and north by the South Pacific Ocean. Includes islands of Australia, Tasmania, New Zealand, and the territory of Papua New Guinea in the eastern part of the island of New Guinea.

5 Europe EUR E

Continent between Asia and the North Atlantic Ocean extending from the Mediterranean and Black Seas to northernmost Norway, including North Cape; west to the North Atlantic Ocean; and east to the western borders of Estonia, Latvia, and Lithuania in the Soviet Union. Includes the North Sea Islands, Ireland, Northern Ireland, and the United Kingdom.

6 North America N-AMER N

e. Explanation

Continent between the North Atlantic and North Pacific Oceans extending south to the Panama-Colombia border and extending northward to the Arctic Ocean. Includes the Greater and Lesser Antilles and Caribbean Islands, Islands of the West Indies, Greenland, Newfoundland, and the U.S. States of Alaska and Hawaii.

7 South America S-AMER S

Continent in the Western Hemisphere extending north from Cape Horn to the Panama-Colombia border; west to the Pacific Ocean; and east to the Atlantic Ocean.

8 Arctic Ocean ARTC-OCN-AGGR 5
 Aggregation

Body of water including islands located north of 70 degrees north latitude, including the Norwegian Sea, Northwest Passage, Greenland Sea, and the Chukchi Sea but not including Baffin Bay, which is included within the North Atlantic Ocean Aggregation.

9 Baltic Sea BLTC-SEA-AGGR 7
 Aggregation

Body of water including islands bordering the coasts of Denmark, Sweden, Finland, Soviet Union, Poland, and the Federal Republic of Germany, which includes the water areas of the Little Belt, Great Belt, and The Sound. The water body extends west from the Skagerrak, near the North Sea, to a line joining the northernmost point of Denmark and Tjoern Island.

10 Great Lakes GR-LAKE-AGGR 9
 Aggregation

Chain of five lakes and seaway located within the land area of North America on the Canadian-U.S. border or entirely within the United States. Includes and extends to the St. Lawrence Seaway, but does not include the Gulf of St. Lawrence.

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
--------------------	---------------------	-----------------------------	---------------------

11	Indian Ocean Aggregation	INDN-OCN-AGGR	6
----	-----------------------------	---------------	---

e. <u>Explanation</u>

Body of water including islands extending south from the northern limits of the Arabian Sea, Bay of Bengal, Persian Gulf, Gulf of Aden, Laccadive Sea; south to the Antarctic Continent; west to the eastern coastal limits of the African Continent and the South Atlantic Ocean Aggregation at the Meridian of Cape Agulhas (20 degrees east longitude) as far south as Antarctica; and east to the eastern limits of the Strait of Malacca, Java Sea, Bali Sea, Savu Sea, Timor Sea and western coastal limits of the island of Australia to Southeastern Cape (the southernmost point on Tasmania - 46 degrees east longitude) and down the meridian to Antarctica. The limits of the Indian Ocean Aggregation include the seas lying within it to include the Red Sea between Asia and Africa.

12	Mediterranean Sea Aggregation	MED-SEA-AGGR	8
----	----------------------------------	--------------	---

Body of water, including islands, extending between Africa and Europe and within Europe and Asia including the Mediterranean Sea, Black Sea, Caspian Sea, and Aral Sea. Extends east from the westernmost point of Gibraltar, along the coastlines of Africa and Europe to the Dardanelles as far as a line between Kum Kale and Cape Helles in the Dardanelles, to the coastal limits of the water area in the Seas of Azov and Marmara, between Asia and Europe. Includes the Caspian Sea extending north from Iran to the U.S.S.R. in western Asia and the Aral Sea located east of the Caspian Sea in the western part of Asia with borders completely encompassed by the U.S.S.R. The limits of the Mediterranean Sea Aggregation include all seas lying within the bodies of water mentioned above.

13	North Atlantic Ocean Aggregation	N-ATL-OCN-AGGR	1
----	--	----------------	---

Body of water including islands and island groups extending from the South Atlantic Ocean Aggregation (generally the Equator with the exception of the Gulf of Guinea, which extends south of the Equator) northward to the southern limits of the Norwegian Sea. The limits of the North Atlantic Ocean Aggregation include the seas lying within it. This includes Baffin Bay, Kane Basin, Mares Strait, North Sea, Hudson Bay, Gulf of St. Lawrence, and the Gulf of Mexico but excludes the Great Lakes, Baltic Sea, and the Mediterranean Sea. This aggregation also includes the Caribbean Sea less landmasses which are part of North America.

a. <u>Item No.</u>	b. <u>Item Name</u>	c. <u>Item Abbreviation</u>	d. <u>Data Code</u>
14	North Pacific Ocean Aggregation	N-PAC-OCN-AGGR	3

e. Explanation

Body of water including islands, extending east to the western limits of the coast of southwest Alaska, British Columbia, and the rest of the Americas; to the north by the northern limits of the Bering Strait and the Gulf of Alaska; to the west by the easterly limits of the Asian coastal waters to include the western limits of the Sea of Okhotsk and the Japan Sea; and on the south by the South Pacific Ocean Aggregation (generally the Equator with the exception of the Gilbert and Galapagos Island Groups, which are included entirely in the South Pacific Ocean Aggregation, and the Halmahera (3H), Molucca (3M), and the South China (3U) Seas, which extend south of the Equator but are included in the North Pacific Ocean Aggregation). The limits of the North Pacific Ocean Aggregation include the seas lying within it. This aggregation excludes the island landmasses of Ceylon, Japan, Formosa, Philippines, and Sumatra, which are part of Asia.

15	South Atlantic Ocean Aggregation	S-ATL-OCN-AGGR	2
----	--	----------------	---

Body of water including islands extending from Antarctica northward to the North Atlantic Ocean Aggregation (generally the Equator with the exception of the Gulf of Guinea (1G) which extends south of the Equator but is included in the North Atlantic Ocean Aggregation), separated from the South Pacific Ocean Aggregation by the meridian of Cape Horn (68 degrees west longitude) to the Antarctic Continent, and bordering the Indian Ocean Aggregation at the meridian of Cape Agulhas (20 degrees east longitude) to the Antarctic Continent. The limits of the South Atlantic Ocean Aggregation include the seas lying within it.

16	South Pacific Ocean Aggregation	S-PAC-OCN-AGGR	4
----	---------------------------------------	----------------	---

Body of water including islands between the Americas and Asia bounded on the east by the western coast of South America and the meridian of Cape Horn in South America to Antarctica; on the north by the North Pacific Ocean Aggregation (generally the Equator with the exception of the Gilbert and Galapagos Island groups, which extend north of the Equator but are included in the South Pacific

DATA STANDARD NO. 4

DIAM 65-18

1. NAME: WATER BODY OF THE WORLD.
2. ABBREVIATION: WTR-WRLD.
3. DIA REFERENCE NUMBER (STID): E00194. DOD REFERENCE NUMBER: WA-SA.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: Continuous water areas representing separate or self-contained bays, seas, and straits, recognized and accepted internationally and specifically defined as part of an ocean aggregation or special purpose water grouping from the data element "Divisions of the World."
6. FORMAT DESCRIPTION:
 - a. Type: Data element.
 - b. Field Length: 2 character-positions.
 - c. Structure: Alpha/numeric; code.
9. DATA USE IDENTIFIER:
 - a. Name: Water Body of the World.
 - (1) Abbreviation: WTR-WRLD.
 - (3) Explanation: This data element is designed to provide complete coverage of the earth's continuous water areas without overlap or duplication in coverage.
11. DATA ITEMS AND CODES: See appendix C for appropriate data items and data codes, and appendix G for illustrated graphics.

29 September 1972

DATA STANDARD NO. 5

1. NAME: COUNTRIES OF THE WORLD.
2. ABBREVIATION : CNTRY-WORLD.
3. DIA REFERENCE NUMBER (STID): ~~E00047.~~ DOD REFERENCE NUMBER: CO-XV.
E00358.
4. REQUIREMENT: This data element is one of the most widely used data standards, not only in DIA files concerned primarily with foreign countries, but throughout the Federal Government, as promulgated by FIPS 10.
5. DEFINITION: The independent first-level geographic-political areas and their dependencies, areas of quasi-independence, and areas with special sovereignty associations, unrecognized, but sovereign political regimes and administrative divisions without sovereignty, and outlying areas of the United States, including islands in dispute.
6. FORMAT DESCRIPTION:
 - a. Type: Data element.
 - b. Field Length: 2 character-positions.
 - c. Structure: Alpha; code.
9. DATA USE IDENTIFIERS:
 - a. Name: Countries of the World.
 - (1) Abbreviation: CNTRY-WORLD.
 - (2) Explanation: This data element is designed to provide complete coverage of the earth's landmasses without overlap or duplication of coverage.
11. DATA ITEMS AND CODES: See appendix D for appropriate data items and data codes, and appendix H for graphics.

DATA STANDARD NO. 6

1. NAME: STATE-PROVINCE OF A COUNTRY.
2. ABBREVIATION: STATE-PROV-CNTRY.
3. DIA REFERENCE NUMBER (STID): EQ0459.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: The first-order administrative division (or political level of organization) which specifically identifies the subdivisions of each data item of the data element "Countries of the World." The first-order administrative divisions of a country represent full coverage of the national territory, thus precluding any gaps or overlaps in the area of the entity. Divisions or political level of organization defined as first-order are not always equal in rank. These divisions, however, are always considered first-order in that no one entity at such level has complete jurisdiction over another entity of the same level. Nevertheless, there may be varying degrees of local autonomy, as where the national government exercises more authority over one division than another of the same level.
6. FORMAT DESCRIPTION:

DATA STANDARD NO. 7

1. NAME: STATES-PROVINCES OF COUNTRIES OF THE WORLD.
2. ABBREVIATION: STATE-PROV-CNTRY-WORLD.
3. DIA REFERENCE NUMBER (STID): ~~000~~54.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: A data chain which provides for the unique identification of the first administrative or political level of organization within countries, dependencies, or areas of special sovereignty, combining the data elements "Countries of the World" and "State-Province of a Country."
6. FORMAT DESCRIPTION:
 - a. Type: Data chain.
 - b. Field Length: 4 character-positions.
 - c. Structure: Alpha/numeric; code.
8. SUBORDINATE DATA STANDARDS:

a. <u>Name</u>	b. <u>Type</u>	c. <u>Field Length</u>	d. <u>Structure</u>

DIAM 65-18A

DATA STANDARD NO. 8

1. NAME: REGION OF COUNTRY.
2. ABBREVIATION: RGN-CNTRY.
3. DIA REFERENCE (STID): E00457. DOD REFERENCE NUMBER: RE-JC.
4. REQUIREMENT: Geopolitical data standards have been developed through research and coordination under authority as the Assigned Responsible Agency (ARA) as assigned by the Department of Defense.
5. DEFINITION: A data item or aggregations of data items from the data element "State-Province of a Country" specifically defined as internationally recognized land entities that are a geographically separated part of a country, or two or more contiguous first-order subdivisions of a country, including items in dispute.
6. FORMAT DESCRIPTION:
 - a. Type: Data element.
 - b. Field Length: 2 character-positions.
 - c. Structure: Alpha; code.
9. DATA USE IDENTIFIER:

APPENDIX A

GLOSSARY

The DoD Data Element and Related Features Standardization Program defines five terms pertinent to this manual. Terms defined herein, which are followed by (JCS) have been approved for United States Joint Service usage. Additional material is set off in brackets []. This material should not be construed as changing or conflicting with the standardized JCS Pub 1 definition.

1. Data Element - (JCS). A basic unit of information having a unique meaning and which has subcategories (data items) of distinct units or values. Examples of data elements are Military Personnel Grade, Sex, Race, Geographic Location and Military Unit.
2. Data Item - (JCS). A subunit of descriptive information or value classified under a data element. For example, the data element "Military Personnel Grade," contains data items such as sergeant, captain, and colonel. ["Countries of the World" contains data items such as "Afghanistan, Albania, Algeria."]
3. Data Code - (JCS). A number, letter, character, or any combination thereof used to represent a data element or data item. For example, the data codes "E8," "03," and "06" might be used to represent the data items of sergeant, captain, and colonel under the data element "Military Personnel Grade."
4. Data Use Identifier - the name given to the use of a data element in a data system. For example, the data element "States of the United States," when used in a system may be assigned a data use Identifier, "State of Birth" or "State of Residence."
5. Data System - combinations of personnel efforts, forms, formats, instructions and procedures, data elements and related data codes, communications, and data processing equipment, which provide an organized and interconnected means, either automated, manual, or a mixture of these for recording, collection, processing, and communicating data.
6. Assigned Responsible Agency (ARA) - DoD Component receiving assignment to chair a working group of affected DoD Components to develop a recommendation to the Assistant Secretary of Defense (Comptroller) for standardization of specific data elements and related features. After approval of a recommended specific standard by the Assistant Secretary of Defense (Comptroller), the ARA will maintain the standard by evaluating, approving and coordinating changes in related features.

7. Data Chain - A name or title given to the use of a combination of two or more logically related standard data elements, data use identifiers, or other data chains. For example, the data chain "Complete Calendar Date" is made from the combination of the four data elements "Century," "Year," "Month," and "Day."

APPENDIX F

GEOPOLITICAL DATA STANDARDS

1. This appendix contains a listing of current categorical groupings of Department of Defense approved data standards arranged in hierarchical order to promote the understanding of their interrelationships. The column headings do not represent a recommendation concerning the placement or use of the data elements within a data field or file. Further, indentations of data items do not indicate subordination. Column heading and indentation format is used to facilitate correlation of the data items with respect to the data element to which they logically belong. Column headings of the listing are as follows:

<u>DATA ELEMENT NAME</u>	<u>COLUMN IDENTIFICATION</u>
Celestial Body of the Solar System	AA
Division of the World	B
Water Body of the World	CC
Countries of the World	DD

2. COMPOSITE LISTING OF GEOPOLITICAL DATA STANDARDS, ARRANGED IN HIERARCHICAL ORDER ALPHABETICALLY.
